H2P OFFERS A COMPLETE PROGRAMME FOR THE CONTROL OF VECTOR-BORNE DISEASES

Skin2P Body and Screen2P Wear or Screen2L Long Lasting are effective against mosquitoes of the Aedes, Anopheles and Culex species, which are responsible for the transmission of diseases like dengue, chikungunya and malaria.

MALARIA
Malaria is a parasitic disease transmitted to humans between dusk and dawn by bites from the Anopheles mosquito. The Anopheles mosquito makes no noise and its bite is not painful. A single bite is enough. Malaria can be fatal if it is allowed to develop. The risk is mainly present in sub-Saharan Africa, even in towns. According to the WHO in 2012 malaria caused more than 600,000 deaths throughout the world.

ARBOVIRUS INFECTIONS
Chikungunya, dengue, West Nile virus, etc. are transmitted during the day by bites from various mosquitoes such as the Aedes or the tiger mosquito. They are acute in many countries and are responsible for fevers which can be followed by various complications. The only prevention is protection against bites.

For optimum protection combining the skin repellent lotion, Skin2P Body, with a clothing insecticide, Screen2P Wear or Screen2L Long Lasting, is recommended.

ZONES AFFECTED BY MALARIA

Countries or zones where malaria is transmitted
Countries or zones at risk of limited malaria transmission

SOURCE: OMS
H2P, a subsidiary of the PSA Group, and an expert in insect control products, is committed to the protection of humans. Our Research and Development Department enables us to create our own formulas and to test them in real conditions. In order to guarantee the quality of our products we manage the entire manufacturing chain, from production to marketing. Our insecticides and repellents are already used by professionals (army, airlines, remote sites, etc.)

**Recommendations for use: Against Malaria**
- Apply from nightfall to dawn, apply throughout the day against dengue, chikungunya and West Nile virus.
- Renew application after 8 hours, or more frequently in case of sweating, high air humidity and bathing.

**Recommendations for use: Impregnate your garments**
- 24 hours before departure.

**Insecticide to be sprayed on all types of fabrics**
- Prevents bites through clothing
- Specially adapted for tropical areas
- Solvent-free non-flammable formula
- 100 ml of product = 2 complete outfits

Available as a spray and an aerosol

**Repellent lotion to be sprayed on to the skin to protect against mosquito bites**
- Body and face
- Specially adapted for tropical areas
- Pleasant lotion on the skin with a moisturising effect
- Non-flammable formula

**Recommendations for use:**
- Apply 20 minutes after using sun cream
- From 24 months pregnant woman
- Protection 8H*

**Screen2P Long Lasting**
- 15 Washes
- Patented formula

**Screen2P Wear**
- Compliant with the BEH*
- 5 Washes

*Weekly Epidemiological Bulletin
